Dear Collector:

Thanks so much for your wonderful response to our first "Recollections". It is our great pleasure to present herewith, our second "Edition".

We've come up with virtually all-new selections for you to pick through, although you might find one or two coins re-offered from last time, at a lower price.

Also, we are featuring towards the back of the book a number of lots of multiple coins, great for the student, the accumulator or someone who might want them for presents.

So, welcome to "Recollections-II" May it make some of these long, cold, dreary winter nights a little more bearable!

Sincerely,
The Staff

All coins are graded according to ANACS standards, which do not, unfortunately, mention scratches, digs, edge bumps, etc. It is our observation that some of these flaws are to be expected, especially in coins AG to fine. Nevertheless, where they are considered to be a bit more than usual, they have been described. Usually, in such cases, we have penalized the coin price-wise, generally dropping the starting bid down about one full grade.

In the case of early copper, for many issues, porous and/or rough or pitted planchets are to be expected. Classic heads (1808-14) are generally found on rough planchets due to the poor quality of copper used during these troubled years. (Old sheathing from wrecked ships, exposed to perhaps 100 years in salt water, was a favorite source.) For these coins, a smooth planchet is the exception, not the rule. The first American copper mill was built by Paul Revere in 1801, and previous to this, any copper found anywhere was resmelted for planchets. This included old pots, old coins, naval sheathing, old jewelry, etc. The sole exception is for 1797, when the planchets were imported from England, and were of generally high quality.
